

CyberPatrol 7.5

Internet Safety Software

Access to the Internet increasingly introduces new dangers and content that negatively affects you, your PC users and your PC. CyberPatrol is specifically designed to help combat these threats and lock-down the PC.

Why CyberPatrol 7.5?

CyberPatrol gives you the tools to understand and manage your Internet access in a flexible way that best suits you and your users' needs – yet allow the freedom to explore.

Only CyberPatrol delivers powerful client-based, browser independent, Internet safety software for Windows that's always fresh, has regular weekly list updates and no extra costs for technical support, upgrades, password resets, software reinstalls, or additional supplementary URL lists. CyberPatrol 7.5 offers the most compelling upgrade in its history and is designed to help an online generation get the most from the Internet!

Best Content

Understanding Web based content and categorizing it accordingly is at the heart of quality filtering. To continuously protect our clients we analyze more Web pages for threats than anyone else and deliver the industry's premier database for client-based Internet safety software. Giving you the confidence to manage your Internet access appropriately:

- 13 well organized categories
- 60+ team of Internet researchers
- International language content
- Regular weekly list updates

Layered Technology

Because the Internet changes by the second and no matter how comprehensive any database of URLs is, users will always discover new sites as they browse. That's why CyberPatrol uses multiple layered dynamic filtering to defend against sites too new to be in its CyberLIST. CyberPatrol's technologies individually check for threats by interrogating:

- Website address
- Patterns within the URL
- Page content
- HTML source code
- Web links and file names

Safeguard Against Internet Threats

Monitor Internet Activity

Monitoring and logging for many is the first important step in taking control of their Internet access. It clearly shows the surfing habits of users so you know exactly where they go online, at what time and for how long.

Protect Against Harmful Sites and Images

Stop users accessing harmful Internet content by blocking unsuitable websites, newsgroups and explicit search engine images. Use with time limits to take control, yet give the freedom to explore.

Restrict Chat & Instant Messaging

Chat and instant messaging is great for talking to friends or even making new ones. But chat is unproductive within the workplace and kids need to be protected from online predators and prevented from disclosing personal information.

Limit Time Online and Access to Programs

Time management ends the frustration of not knowing how long someone has been online or has been using specific locally held programs such as games and chat. Get peace of mind knowing you have set predetermined time rules.

Control Program Downloads

Downloading programs from the Internet is an increasing security nightmare, whether it's the fear of copyrighted or illegal materials, or malicious Spyware. Stop indiscriminate downloads by locking down your PC to eliminate the worry.

Privacy Protection

Help stop private information, like names, addresses and phone numbers from being revealed or exploited, by setting up rules so key information is filtered out before it leaves your computer.

CyberPatrol's Multi-layered Internet Protection

Monitor

ENHANCED!

- Monitor Internet activity for a quick and accurate picture of surfing habits.
- Reports clearly show sites visited, time of day and duration.
- Real-time Activity Monitor for fine-tuning and troubleshooting settings.
